2023 Hazard Mitigation Plan Update

Hazard Mitigation Plan

A Hazard Mitigation Plan is a community-driven, living document that assesses vulnerability to natural and man-made hazards and identifies mitigation strategies to reduce vulnerability.

Hazards

Hazards include natural events which cause damage or pose risk to residents, the environment, buildings, and your local economy. Hazard types include flooding, wildfire, severe storms, and drought.

Mitigation

Mitigation is any action that reduces risk.

These actions depend on the specific needs of your community and existing capabilities. Examples of projects can include backup generators, storm shelters, alert sirens, flood control, and education programs.

The Northern Cheyenne Tribe is leading the planning effort to update its Hazard Mitigation Plan, or HMP. Tribal residents and stakeholders across the reservation are encouraged to engage in this planning process.

Why the Northern Cheyenne Tribe is Participating in this Planning Process:

- To gain eligibility for FEMA mitigation grant programs
- To identify strategies to reduce your community's risk to hazards and disasters
- To build relationships within your community and region that foster resilience across a larger geographic area

Find out how YOU can be involved by checking the project website!
